

# Injury Assessment Report

Date: 2025-08-12 14:58:36

**Injury Type: Abrasion**

## Precautions:

- Clean the wound gently with mild soap and running water.
- Apply gentle pressure using a clean cloth to stop any bleeding.
- Use sterilized tweezers to carefully remove dirt or debris from the wound.
- Avoid using hydrogen peroxide, iodine, or harsh antiseptics directly on the wound.
- Apply a thin layer of antibiotic ointment or petroleum jelly to the cleaned area.
- Cover the wound with a sterile bandage and change the dressing daily to monitor for infection.

## Recommended Medications:

- Apply over-the-counter antibiotic ointments like Bacitracin or Neosporin to prevent infection.
- Use petroleum jelly to keep the wound moist and promote faster healing.
- Cover with sterile bandages or gauze to protect the area and prevent contamination.
- Take ibuprofen to reduce pain, swelling, and inflammation if needed.
- Use acetaminophen as an alternative analgesic if NSAIDs are contraindicated.
- Take prescription oral antibiotics like amoxicillin or cephalexin if the abrasion shows signs of infection.
