

# Injury Assessment Report

Date: 2025-08-12 14:59:05

**Injury Type: Ulcer**

## Precautions:

- Relieve pressure on the ulcer by repositioning or using off-loading cushions.
- Gently clean the ulcer daily with saline or mild soap and water.
- Avoid using hydrogen peroxide or iodine on the ulcer unless prescribed.
- Keep the ulcer bed moist with appropriate dressings like hydrocolloid or foam.
- Protect the surrounding skin with barrier creams to prevent breakdown.
- Maintain proper hygiene, hydration, and nutrition to support the healing process.

## Recommended Medications:

- Clean the wound using normal saline for gentle and non-irritating irrigation.
- Apply barrier creams like zinc oxide or dimethicone to protect nearby skin.
- Use hydrocolloid or foam dressings to maintain a moist healing environment.
- Apply silver sulfadiazine cream if there is a high risk of infection.
- Use topical prescription antibiotics like mupirocin if the ulcer shows signs of infection.
- Use pressure-relieving devices such as special cushions or mattresses to prevent further injury.
